RE: Port Townsend Paper Company White Liquor — HAZMAT Preparedness — V_1.17

Dear Fire Chief,

I write with a simple and direct request: we want Port Townsend Paper Company to make safety, health, and the environment their number one priority. Not their second priority. Not a consideration balanced against production schedules and profit margins. Number one.

I am a Port Townsend resident writing to Jefferson County Fire District #5 about HAZMAT preparedness related to PTPC. Your district is geographically among the closest emergency responders to PTPC's 450-acre waterfront facility. As a required member of the Jefferson County Local Emergency Planning Committee (LEPC) under the Emergency Planning and Community Right-to-Know Act (EPCRA), your district has both a right and a responsibility to participate in emergency response planning for PTPC's white liquor storage.

PTPC operates a kraft pulp and paper mill on 450 acres bordering Port Townsend Bay, five miles from Port Townsend's residential neighborhoods. The mill produces 950–1,000 tons per day using the kraft process — the same white liquor chemistry (sodium hydroxide and sodium sulfide) that killed 11 workers in Longview, Washington on May 26, 2026, when a white liquor tank imploded at the Nippon Dynawave mill in the deadliest industrial accident in modern Washington State history.

PTPC's documented compliance record is public in US Environmental Protection Agency (EPA)'s EPA Enforcement and Compliance History Online (ECHO) database (FRS ID: 110000490326):

- Clean Air Act: High Priority Violation every single quarter for the past three years
- Clean Water Act: documented spills into Port Townsend Bay including: 800 gallons of untreated process wastewater (November 2021–March 2022, fine \$27,000); 114,000 gallons of untreated wastewater near Glen Cove (April 2025, fine \$20,000 — less than 9 cents per gallon); and 1,000 gallons of condensed water (January 2025) — plus two additional Ecology penalties issued in 2023 for 2022 water quality violations
- Hazardous Waste: June 2025 inspection found 9 violations including emergency preparedness failures
- 12 million gallons of effluent (liquid waste or wastewater discharged into the environment) discharged into Port Townsend Bay every day

- The size, age, and inspection history of PTPC's white liquor storage tanks are not publicly disclosed — white liquor is exempt from US Environmental Protection Agency (EPA)'s Risk Management Program

In 2024, the federal Agency for Toxic Substances and Disease Registry (ATSDR) confirmed hydrogen sulfide and other sulfur compounds near PTPC exceed US Environmental Protection Agency (EPA) chronic health reference concentrations. The Pacific Northwest sits on the Cascadia Subduction Zone, capable of producing a magnitude 9.0 earthquake. A major seismic event could rupture PTPC's white liquor tanks, overwhelm secondary containment, and send caustic chemicals directly into Port Townsend Bay.

On May 26, 2026, the Longview disaster required approximately 40 firefighters and a regional hazmat team. White liquor has a pH of approximately 13 — contact causes immediate deep chemical burns requiring specialized decontamination before hospital transport. The same chemistry is stored at PTPC, within your district's response area.

What I Am Requesting:

- Formally support the activation of the Jefferson County Local Emergency Planning Committee (LEPC) — Jefferson County Emergency Management Director Willie Bence has confirmed that the Local Emergency Planning Committee (LEPC) meets quarterly, is open to the public, and that Port Townsend Paper Company (PTPC) is an active participant. A Local Emergency Planning Committee (LEPC) meeting is scheduled for July 2026, at which the Longview disaster is expected to be addressed. Under the Emergency Planning and Community Right-to-Know Act (EPCRA), PTPC reports its chemical inventories annually to local fire departments, the Local Emergency Planning Committee (LEPC), and the Washington State Department of Ecology. — and actively participate in the development of a white liquor emergency response plan for Port Townsend Bay
- Request PTPC's annual Tier II chemical inventory from Jefferson County Emergency Management — you are legally entitled to this as a Local Emergency Planning Committee (LEPC) member under Emergency Planning and Community Right-to-Know Act (EPCRA)
- Coordinate with East Jefferson Fire Rescue on joint HAZMAT preparedness including mass decontamination capability and coordination with Jefferson Healthcare for white liquor burn treatment
- Request a site visit to PTPC to familiarize your crew with the facility layout, white liquor storage locations, and emergency access points

Respectfully,

David Ginsberg
